Memo to File:

Re: Union Carbide Corp.
LaSal - Snowball Mine
ACT/037/026
EXP/037/008

A telephone conversation was held with Kent Dahlquist of Union Carbide on November 28, 1978 concerning the LaSal - Snowball Mine. The field inspection tentatively scheduled with Jim Smith on December 1, 1978 was changed to December 6, 1978.

Mr. Dahlquist was asked if Union Carbide would prefer that the four existing and the four possible future vent shafts should be bonded at this time, as opposed to bonding only the four existing vent shafts. He stated that all eight should be computed in the bond.

Mr. Dahlquist was asked for a surface map of the mine site showing all of the roads, and delineating county and private pre-existing roads that will be left open after termination of mining. The map is needed for the surety computation. He stated that the requested map and plans for the Beaver Shaft will be brought to the December 6, 1978 meeting.

Mr. Nylund of the exploration staff was also spoken to. He was asked if someone from his staff could be at the meeting to show the Division staff the plugging status of the project near Shieler's store. He stated that Mr. Chuck Coe would be there.
